

Automotive/Advanced Manufacturing Electrical

Program Information

Electrical wiring is an integral part of industry, commercial enterprises, and residential homes. The Electrical curriculum integrates basic electrical skills and high tech instrumentation for a wide range of industrial employment. The term “instrumentation” refers to instruments used to measure and control manufacturing conversions or treating processes. Knowledge of electricity and process control gives a person a more marketable skill to offer all industries. These fields expand into SMART instruments, PLC/DCS interface and AC variable frequency motor controls. The Electrical Technology program is designed to teach the basic principles of electricity, the National Electric Code, and the safe installation of electrical wiring and equipment. Electrical/Instrumentation Technology is designed to teach basic instrumentation for measurement and control in manufacturing. Through the various courses, a student will gain knowledge and practical hands-on experience in both technologies for servicing, troubleshooting and monitoring these systems and equipment.

Occupational Choices

Employment of electrical and electronics installers and repairers of commercial and industrial equipment, which represents about half of this profile’s 2016 employment, is projected to grow 2 percent from 2016 to 2026, slower than the average for all occupations. As the industrial sectors of the economy expand, these workers will be needed to service and repair equipment.

Employment of powerhouse, substation, and relay electrical and electronics installers and repairers is projected to grow 4 percent from 2016 to 2026, slower than the average for all occupations. Although the installation of new, energy-efficient technologies will likely spur demand for some new workers, slow employment growth in the utilities industries is expected to temper demand for these workers.

Employment of electric motor, power tool, and related repairers is projected to grow 7% from 2016 to 2026, about as fast as the average for all occupations. Improvements in electrical and electronic equipment design, as well as the increased use of disposable tool parts, are expected to result in slow employment growth. Overall job opportunities should be good for qualified workers who are familiar with electronics, especially those with an associate’s degree in electronics.

Source: Bureau of Labor and Statistics Occupational Outlook Handbook, 2016-2026 Edition, 2018 Survey

Average Full-Time Wage

The median annual wage for electrical and electronics installers and repairers was \$57,210 in May 2017. The median wage is the wage at which half the workers in an occupation earned more than that amount and half earned less. The lowest 10 percent earned less than \$31,940, and the highest 10 percent earned more than \$90,590.

Additional Requirements

- Student must be at least 16 years of age.
- Student must have an official copy of high school transcript or GED certificate and transcript from other colleges on file in the admissions office.
- Student must take the ACCUPLACER test.
- Student must be able to perform simple mathematical computations correctly.

Awards Available

Associate of Applied Science
Automotive/Advanced Manufacturing
Electrical

Residential/Commercial Electrician

Associate of Applied Science
Automotive/Advanced Manufacturing
Electrical
Electrical Technician

Associate of Applied Science

Location: Patterson Site - Bldg. M

As part of ongoing planning and evaluation, the College regularly evaluates student learning outcomes for each program.

Estimated Program Length & Cost *

<u>Award</u>	<u>Length</u>	<u>Credit Hours</u>	<u>Tuition Fees</u>	<u>Books</u>	<u>Tools</u>	<u>Supplies</u>
Associate Degree	6 Terms	76	\$11,780	\$1,920	\$600	\$300
Short Term Certificate	3 Terms	26	\$4,030	\$1,000	\$600	\$200

* Tax not included. Prices are subject to change without prior notice; cost of books may vary considerably among suppliers. Cost of general education books is in addition to the total listed above. The length of the program is based on full-time status of 12-15 credit hours per term. Enrollment in transitional level general education courses will alter the length of the program.

**Associate of Applied Science
Automotive/Advanced Manufacturing
Electrical
Residential/Commercial Electrician**

General Education Requirements (15 hours)**Area I - Written Composition (3 hours)**

ENG-101	English Composition I	3
ENG-102	English Composition II	3
ENG-130	Technical Report Writing	3

Area II - Humanities & Fine Arts (3 hours)

(Humanities and Arts disciplines include but are not limited to: Area/Ethnic Studies, Art and Art History, Foreign Languages, Music and Music History, Philosophy, Ethics, Religious Studies, Theater and Dance.)

Note: If SPH-106, SPH-107, SPA-101 or SPA-102 has been taken an additional 3 semester hours in Humanities and Fine Arts must be taken to satisfy requirements in Area II.

Arts:

ART-100	Art Appreciation	3
MUS-101	Music Appreciation	3

Humanities:

PHL-106	Intro to Philosophy	3
PHL-200	Ethics in the Workplace	3
PHL-206	Ethics & Society	3
PHL-210	Ethics and the Health Sciences	3
REL-100	History of World Religions	3
REL-151	Survey of Old Testament	3
REL-152	Survey of New Testament	3
SPA-101	Intro Spanish I	3
SPA-102	Intro Spanish II	3
SPH-106	Fundamentals of Oral Comm	3
SPH-107	Fundamentals of Public Speaking	3

Literature:

ENG-251	American Literature I	3
ENG-252	American Literature II	3
ENG-261	English Literature I	3
ENG-262	English Literature II	3
ENG-271	World Literature I	3
ENG-272	World Literature II	3

Area III - Natural Science & Mathematics (6 hours)

(In addition to Mathematics, disciplines in the Natural Sciences include: Astronomy, Biological Sciences, Chemistry, Geology, Physical Geography, Earth Science, Physics, and Physical Science.)

Note: 3 semester hours in MTH must be completed. Additional hours can be taken in the Natural Science area.

Mathematics:

MTH-100	Intermediate Algebra	3
MTH-103	Intro to Technical Mathematics	3
MTH-104	Plane Trigonometry	3
MTH-110	Finite Mathematics	3

Course Descriptions Automotive/Advanced Manufacturing Electrical

Course #	Course Title	Credit Hours
ADM-101	PRECISION MEASUREMENT	3
	PREREQUISITE: None	
	This course covers the use of precision measurement instruments utilized in inspection. In addition, basic print reading techniques reverse engineering, and related industry standards required in advanced manufacturing disciplines are covered. Upon completion, students should be able to demonstrate correct use of precision measuring instruments, interpret basic prints and apply basic reverse engineering techniques. Note: This is a suitable substitute for MTT-127.	
ADM-111	MANUFACTURING SAFETY PRACTICES	3
	PREREQUISITE: None	
	This course is an introduction to general issues, concepts, procedures, hazards, and safety standards found in an industrial environment. This safety course is to make technicians aware of safety issues associated with their changing work environment and attempt to eliminate industrial accidents. This course will offer credentialing for NCCER Core and OSHA 10 hour.	
AUT-210	INDUSTRIAL ROBOTS	3
	PREREQUISITE: None	
	This course covers principles of electro-mechanical devices. Topics include the principles, concepts, and techniques involved in interfacing microcomputers to various electro-mechanical devices to produce geographical movement. Upon completion, students should be able to apply the principles of electro-mechanical devices. This course is also taught as ILT 216.	
AUT-211	INDUSTRIAL ROBOTS LAB	
	PREREQUISITES: None	
	This lab covers the principles, concepts, and techniques involved in interfacing microcomputers to various electro-mechanical devices to produce geographical movement. Upon completion students should be able to apply the principles of electro-mechanical devices. This course is also taught as ILT 217.	
ELT-104	DISTRIBUTION SYSTEMS	3
	PREREQUISITE: ELT-108 and ELT-109	
	This course involves the theory, applications, calculations, and connections associated with transformers and power distribution systems commonly used in the electrical field.	
ELT-108	DC FUNDAMENTALS	3
	PREREQUISITE: None	
	This course is designed to provide students with a working knowledge of basic direct current (DC) electrical principles. Topics include safety, basic atomic structure and theory, magnetism, conductors, insulators, use of Ohm's law to solve for voltage, current, and resistance, electrical sources, power, inductors, and capacitors. Students will perform lockout/tagout procedures, troubleshoot circuits and analyze series, parallel, and combination DC circuits using the electrical laws and basic testing equipment to determine unknown electrical quantities. This is a CORE course.	
ELT-110	WIRING METHODS	3
	PREREQUISITE: None	
	This course is a study of various tasks, wiring methods, materials, and associated NEC requirements that students will be required to work with in residential and commercial wiring courses. This is a CORE course.	
ELT-112	CONCEPTS OF ALTERNATING CURRENT	5
	PREREQUISITE: ELT-108	
	This course provides an advanced study of alternating current (AC) concepts and application principles. Specific topics include safety, terms and symbols, AC electrical theory, components, circuits, electrical measurement instruments, laws of AC, and methods for constructing and measuring various types of AC circuits. Students gain hands-on experience through laboratory exercises designed to analyze complex circuits, power requirements, faults, phase relationships, and power factors. Emphasis is placed on the use of scientific calculators and the operation of various types of test equipment used to analyze and troubleshoot AC circuits.	

Course #	Course Title	Credit Hours
ELT-114	RESIDENTIAL WIRING METHODS PREREQUISITE: None This course is a study of residential wiring practices and methods, the NEC requirements and residential blueprint interpretations. This is a CORE course.	3
ELT-115	RESIDENTIAL WIRING METHODS II PREREQUISITE: ELT-114, ELT-108 and ELT-109 This course is a study of residential wiring practices and methods, the NEC requirements and residential blueprint interpretations. This is a CORE course.	3
ELT-117	AC/DC MACHINES PREREQUISITE: ELT-108 and ELT-109 This course covers the theory and operation of DC motors single and three phase AC motors and the labs will reinforce this knowledge. Emphasis is placed on the various types of single and three phase motors, wiring diagrams, starting devices, and practical application in the lab. This is a CORE course.	3
ELT-118	COMMERCIAL/INDUSTRIAL WIRING I PREREQUISITE: ELT-108 and ELT-109 This course focuses on principles and applications of commercial and industrial wiring. Topics include electrical safety practices, an overview of National Electric Code requirements as applied to commercial and industrial wiring, conduit bending, circuit design, pulling cables, transformers, switch gear, and generation principles. This is a CORE course.	3
ELT-119	CONCEPTS OF SOLID STATE ELECTRONICS PREREQUISITE: ELT-112 This course is an introduction to semiconductor fundamentals and applications to the electronic devices. Course covers the basic operations and applications to include rectifier circuits, transistors, and thyristors. Coverage is given to safety, use, and care with hazardous materials and personal as well as material and environmental considerations. Upon completion students will be able to construct and test for proper operation of various types of solid state devices.	5
ELT-121	CONCEPTS OF DIGITAL ELECTRONICS PREREQUISITE: ELT-112 This course provides instruction in digital electronics. Topics include: number systems and codes, a review of Boolean algebra, logic elements, digital circuits, programmable logic circuits, and memory and computing circuits. This course provides laboratory exercises to analyze, construct, test and troubleshoot digital circuits.	5
ELT-209	MOTOR CONTROLS I PREREQUISITE: ELT-108 and ELT-109 This course is a study of the construction, operating characteristics, and installation of different motor control circuits and devices. Emphasis is placed on the control of three phase AC motors. This course covers the use of motor control symbols, magnetic motor starters, running overload protection, pushbutton stations, multiple control stations, two wire control, three wire control, jogging control, sequence control, and ladder diagrams of motor control circuits. Upon completion, students should be able to understand the operation of motor starters, overload protection, interpret ladder diagrams using pushbutton stations and understand complex motor control diagrams. This is a CORE course.	3
ELT-212	MOTOR CONTROLS II PREREQUISITE: ELT-108, ELT-109, ELT-209, ELT-117, and MTH-103 This course covers complex ladder diagrams of motor control circuits and the uses of different motor starting techniques. Topics include wye-delta starting, part start winding, resistor starting and electronic starting devices. Upon completion, the students should be able to understand and interpret the more complex motor control diagrams and understand the different starting techniques of electrical motors.	3
ELT-231	INTRODUCTION TO PROGRAMMABLE CONTROLLERS PREREQUISITE: ELT-108 and ELT-109 This course provides an introduction to programmable logic controllers. Emphasis is placed on, but not limited to, the following: PLC hardware and software, numbering systems, installation, and programming. Upon completion, students must demonstrate their ability by developing, loading, debugging, and optimizing PLC programs.	3

Course #	Course Title	Credit Hours
ELT-232	ADVANCED PROGRAMMABLE CONTROLLERS	3
	PREREQUISITE: ELT-108 and ELT-109 This course includes the advanced principals of PLC's including hardware, programming, and troubleshooting. Emphasis is placed on developing advanced working programs, and troubleshooting hardware and software communication problems. Upon completion, students should be able to demonstrate their ability in developing programs and troubleshooting the system.	
ELT-234	PLC APPLICATIONS	3
	PREREQUISITE: ELT-108, ELT-109, ELT-209, ELT-117, ELT-231, ELT-232, and MTH-103 This course introduces advanced PLC programming techniques. Topics include tags, parallel processing, program optimization, and advanced math instructions. Emphasis is placed on optimizing PLC functions. Upon completion students will be able utilize advanced instructions to control PLC functions.	
ELT-241	NATIONAL ELECTRIC CODE	3
	PREREQUISITE: ELT-108 and ELT-109 This course introduces the students to the National Electric Code and text and teaches the student how to find needed information within this manual. Emphasis is placed on locating and interpreting needed information within the NEC code manual. Upon completion, students should be able to locate, with the NEC code requirements for a specific electrical installation.	
ILT-108	INTRODUCTION TO INSTRUMENTS AND PROCESS CONTROL	3
	PREREQUISITE: As required by program. This course is an introductory study of the control devices and methods used in industry for the control and transmission of information pertaining to process variables. This study includes an introduction to instrumentation and control mathematics. This course also provides instruction in the fundamental concepts of pressure, force, weight, motion, liquid level, fluid flow and temperature.	
ILT-110	ADVANCED INDUSTRIAL PROCESS CONTROL TECHNOLOGY	3
	PREREQUISITE: As required by program. This course is an advanced study of the principles governing methods of using process variables in the control of industrial processes. The study includes methods and procedures for measuring, displaying and transmitting process variables according to industry standards. The course also includes an in-depth study of mathematics pertaining to industrial control instruments.	
ILT-179	WIRELESS COMMUNICATION DEVICES	3
	PREREQUISITE: As required by program. This course is an introduction course to wireless communication technologies and applications in support of networked structures. Wireless device specification, integration, configuration, and utilization of IEEE 802.11x compliant communication equipment and their integration into the support of WAN and LAN structures commonly found in corporate, industrial, automotive (telematics), or commercial platforms will be the main emphasis of this course. Specific wireless communication theory concerning wireless boundaries, security and encryption methods, and quality of service measurements will be discussed along with WAN/LAN expansion and limitations from a system design prospective.	
ILT-237	NETWORK CABLING - COPPER	2
	PREREQUISITE: As required by program. This course involves presentations, discussions and live simulations of work related experiences involved in data, voice, and video infrastructure. Students learn to terminate, test, troubleshoot, and install copper-based cabling systems. They learn category 5 systems, IBM cabling systems, and coaxial systems. This course helps prepare students for certification as Network Cabling specialists. This course supports CIP Code: 47.0105.	
ILT-238	NETWORK CABLE- FIBER OPTIC	2
	PREREQUISITE: As required by program. This course involves presentations, discussions and live simulations of work related experiences involved in data, voice, and video network infrastructure. Students learn to terminate, test, troubleshoot, and install various fiber optic cabling systems. This course helps students prepare for certifications as certified Network Cabling Specialists. This course supports CIP Code: 47.0105.
