

Medical Radiologic Technology Program Mission

The Medical Radiologic Technology program mission is to prepare individuals as entry-level radiographers who can fulfill the needs of the medical community in the service area by competently and safely performing diagnostic radiographic procedures on adults and children.

Goal 1: *Students will demonstrate clinical competence while safely performing diagnostic radiographic procedures.*

Outcomes

- *Students will accurately position patients for diagnostic radiographic procedures.*
- *Students will practice proper radiation protection for patients, co-workers and self.*
- *Students will demonstrate the proper use of radiographic exposure factors.*

Goal 2: *Students will demonstrate the necessary communication skills to function effectively in the medical community.*

Outcomes

- *Students will communicate effectively within the healthcare setting.*
- *Students will demonstrate effective written communication skills.*

Goal 3: *Students will demonstrate critical thinking skills.*

Outcomes

- *Students will apply critical thinking skills by modifying standard procedures to accommodate patient conditions.*
- *Students will demonstrate critical thinking skills in the evaluation of radiographic images.*

Goal 4: *Students will demonstrate a high level of professionalism.*

Outcomes

- *Students will consistently demonstrate ethical behavior.*
- *Students will consistently demonstrate high levels of professionalism.*
